### Research Summary

Low and medium voltage insulating gloves are specialized safety gloves designed to protect workers who handle electrical equipment from electric shock. These gloves are made from materials with high dielectric strength, such as natural rubber or neoprene, which enable them to withstand and insulate against electrical current. Low voltage gloves are typically used for working with voltages up to 1,000 volts, while medium voltage gloves are designed for voltages between 1,000 to 17,000 volts. These gloves undergo rigorous testing and meet industry standards to ensure their effectiveness in providing electrical insulation. They are often color-coded according to voltage level and are marked with their respective voltage ratings. Low and medium voltage insulating gloves are an essential component of personal protective equipment (PPE) for electrical workers, helping to mitigate the risk of electric shock and ensuring their safety while working on energized equipment or in potentially hazardous electrical environments. It is crucial to follow proper usage guidelines, conduct regular inspections, and replace gloves as recommended by manufacturers or safety regulations to maintain their

integrity and effectiveness.
