### Research Summary

A low-pressure casting machine is a specialized equipment used in the manufacturing process of metal components, particularly for casting aluminum alloys. This type of casting method involves the use of low pressure to fill a mold cavity with molten metal. The machine consists of a furnace that melts the metal and a holding furnace to maintain the metal at the desired temperature. The molten metal is then transferred to a sealed mold through a refractory ceramic tube. Low pressure is then applied, typically through an inert gas or hydraulic pressure, to force the molten metal into the mold cavity. This controlled process helps eliminate air entrapment and produce high-quality castings with improved density, dimensional accuracy, and surface finish. Low-pressure casting machines are commonly used in industries such as automotive, aerospace, and general engineering where precision and quality are critical.

The major global manufacturers of Low-Pressure Casting Machine include Fill, Kurtz Ersa, ISUZU MFG, LPM Group, Sinto, Wanfeng, Italpresse Gauss, OTTO JUNKER, Jiangsu Tianhong Machinery, Lian an Machinery Technology, WELTOP MACHINERY,
