Research Summary

Low Pressure Molding (LPM) with Hot Melt Adhesive is a specialized manufacturing process used for encasing or encapsulating electronic components, connectors, and sensitive assemblies. This method offers a gentle, low-pressure alternative to traditional injection molding techniques. Hot melt adhesive, also known as thermoplastic adhesive, is used in this process. The process involves placing the electronic component into a mold, melting the hot melt adhesive, and then injecting it into the mold at a low pressure. The adhesive solidifies and creates a protective, environmentally sealed, and mechanically stable housing for the component. LPM with hot melt adhesive offers several advantages, including quick cycle times, minimal stress on delicate components, and the ability to mold around complex shapes and contours. It is commonly used in various industries, including automotive, electronics, aerospace, and telecommunications, where a reliable and efficient encapsulation method is required for electronic assemblies.

The major global manufacturers of Low Pressure Molding Hot Melt Adhesive include Henkel, Bostik, Huntsman, SUNTIP, Austromelt, B?hnen, KY Chemical, etc. The global players competition landscape in this report is divided into three tiers.
