Research Summary

LTPS (Low-Temperature Polycrystalline Silicon) glass substrates are specialized materials used in the production of advanced display technologies, such as OLED and high-resolution LCD screens. These substrates serve as the foundation for LTPS thin-film transistors (TFTs), which are key components in driving pixels on modern displays. LTPS glass substrates are engineered to withstand the high temperatures required for the polycrystalline silicon process, while maintaining excellent dimensional stability and uniformity. Their use enables displays with higher resolution, faster refresh rates, improved energy efficiency, and thinner, lighter designs. LTPS technology is commonly found in premium smartphones, tablets, laptops, and automotive displays, supporting the growing demand for sharper and more vibrant visual experiences.

The major global manufacturers of LTPS Glass Substrates include AGC, Nippon Electric Glass, Japan Display, Corning, SCHOTT, TUNGHSU GROUP, Chengdu COE Technology, AUO Corporation, etc. The global players competition landscape in this report is divided into three tiers.
