Research Summary

Lysozyme is an enzyme that is naturally present in various biological systems, including human tears, saliva, and mucus. It is also found in eggs, milk, and certain tissues of animals and plants. Lysozyme acts as a potent antimicrobial agent, playing a crucial role in the body's defense against bacterial infections. It works by breaking down the cell walls of bacteria, leading to their lysis or destruction. This enzyme primarily targets the peptidoglycan layer, a major component of bacterial cell walls. By hydrolyzing the bonds within the peptidoglycan structure, lysozyme weakens the bacterial cell wall, resulting in its disintegration. In addition to its antimicrobial properties, lysozyme also has other biological functions, such as aiding in the digestion of food and contributing to the development of the immune system. Due to its potent antimicrobial activity, lysozyme is utilized in various industrial applications, including the preservation of food, the production of cheese, the prevention of bacterial growth in cosmetics, and even in biomedical research and pharmaceutical manufacturing.

The major global manufacturers of Lysozyme include DSM, Bioseutica, Ditta Calza Clemente, Bouwhuis Enthoven, Proquiga, MAK Wood, Greensnow Egg Products
