Research Summary

M12 lenses, also known as S-Mount lenses, are a type of miniature lens commonly used in small-scale vision systems, such as machine vision applications, robotics, surveillance cameras, and compact digital cameras. The "M12" designation refers to the standardized thread pitch (12mm) used to mount these lenses onto compatible camera modules or lens holders. M12 lenses are characterized by their compact size, typically ranging from 5mm to 10mm in diameter and can have fixed or variable focal lengths. These lenses are designed to capture high-quality images and provide flexibility in focusing and framing. They come in various focal lengths and aperture sizes to meet specific imaging requirements. M12 lenses are lightweight, cost-effective, and offer a wide field of view suitable for capturing detailed images in limited space or close-range applications. They can be easily interchanged, making them versatile for different imaging setups and providing convenience for system integration.
