Research Summary

MAG welding torches, also known as Metal Active Gas or Metal Inert Gas welding torches, are tools used in gas metal arc welding (GMAW) processes. They are handheld devices that deliver the necessary shielding gas and wire electrode to create an electric arc for welding purposes. MAG welding torches consist of a handle or grip, a trigger or switch for controlling the wire feed, and a nozzle or contact tip that directs the shielding gas and wire to the workpiece. The torch is connected to a power source, which provides the electrical current for melting the electrode wire and the base metal together. MAG welding torches are widely used in industrial applications due to their versatility, ease of use, and ability to weld various types of metals with high efficiency. They are essential tools for creating strong and durable welds in fabrication, construction, automotive, and other metalworking industries.

The major global manufacturers of MAG Welding Torches include ABICOR BINZEL, ESAB Group, Lincoln Electric, Panasonic Welding Systems, Fronius International, Kemppi, Tokin Corporation, North Welding Tools Company, Huarui Welding & Cutting
