Research Summary

Magnesium chloride hexahydrate flakes refer to the crystalline form of magnesium chloride that contains six water molecules per magnesium chloride molecule. It has the chemical formula $MgCl_2 \cdot 6H_2O$. The hexahydrate flakes appear as white or clear crystals that have a flaky or granular texture. The presence of water molecules gives the flakes a hydrated form. These flakes are highly soluble in water, making them ideal for various applications. They are commonly used in de-icing and dust control on roads, as the flakes dissolve quickly when they come in contact with moisture. In addition, magnesium chloride hexahydrate flakes are utilized in the production of bath salts and therapeutic bath products, as they can help nourish the skin and relax muscles. They can also be utilized in gardening and horticulture to provide magnesium supplements to soil that is deficient in this essential nutrient.
