### Research Summary

Magnesium oxide boards, also known as MgO boards, are versatile building materials that are primarily composed of magnesium oxide (MgO) and other additives. These boards are highly durable, lightweight, and fire-resistant. They are typically manufactured by combining magnesium oxide with fillers, such as wood chips or perlite, and binders, such as magnesium chloride. The mixture is then compressed and cured to form solid boards. MgO boards offer several benefits, including high strength, mold and mildew resistance, water resistance, and ease of installation. They have excellent fire resistance properties, as magnesium oxide is inherently non-combustible and can withstand high temperatures without releasing toxic gases. MgO boards find applications in various construction projects, such as wall panels, flooring, ceiling tiles, and exterior cladding. They are also used in commercial and industrial settings as a substrate for tile or as a structural element. Due to their sustainable composition and versatility, magnesium oxide boards have gained popularity in the construction industry as an alternative to traditional building materials.

The major global manufacturers of Magnesium Oxide Boards include Magnum Building Products, Gemtree Board, Huizhou Meisen Board, Yongjia Decorative Material, Ruenzhong Building Material, Hongcheng Board, Shandong Oulade, Wantai Wood, Shanghai Xinlong Fireproofing, Suqian Tianyi, TRUSUS, Pengfei Fireproof New Materials, Suzhou Kunshi New Building Materials, Tongxing, etc. The global players competition landscape in this report is divided into three tiers.
