Research Summary

A magnetic pump, also known as a magnetically coupled pump or mag-drive pump, is a type of centrifugal pump that uses magnetic fields to transmit power from the motor to the impeller. It features a hermetically sealed design, where the pump's impeller shaft and the motor shaft are separated by a containment shell. This separation is achieved through the use of a set of permanent magnets, with one set on the motor side and the other set on the impeller side. When the motor spins, the magnetic field created by the magnets on the motor side interacts with the magnets on the impeller side, causing the impeller to rotate. This eliminates the need for a traditional shaft seal, such as a mechanical seal, which is prone to leakage and wear. By eliminating the shaft seal, magnetic pumps offer benefits such as improved leak containment, reduced maintenance, and enhanced reliability. They are commonly used in applications where avoiding leakage of the pumped fluid, such as corrosive chemicals or hazardous substances, is critical.

The major global manufacturers of Magnetic Pumps include Flowserve, Sundyne, Iwaki, Hermetic, Dickow Pumpen, Sanwa Hydrotech, Klaus Union, Dandong Colossus, ITT

Goulds Pumps, Richter Chemie-Technik, Verder Liquids, Magnatex Pumps, ASSOMA, Lanzhou Highland, Taicang Magnetic Pump, March Manufacturing, GemmeCotti, Desmi, etc. The global players competition landscape in this report is divided into three tiers.
