Research Summary

A magnetic reed switch is a small and simple electronic device that consists of a pair of ferromagnetic reeds encased in a hermetically sealed glass tube. The reeds are thin metal strips that are sealed at one end and have contacts at the other end. When a magnetic field is applied to the switch, the reeds become magnetized and attract each other, closing the circuit and completing the electrical connection between the contacts. When the magnetic field is removed, the reeds lose their magnetism, and the contacts separate, breaking the circuit. This makes the magnetic reed switch a highly sensitive, reliable, and low-power device suitable for various applications where proximity sensing, position detection, or on/off switching is required. Magnetic reed switches are commonly used in household appliances, security systems, door and window sensors, automotive applications, and many other electronic devices.

The major global manufacturers of Magnetic Reed Switch include Standex Electronics, Nippon Aleph, Comus International, RMCIP, Littelfuse, HSI Sensing, PIC, PIT-RADWAR, Xurui Electronic, etc. The global players competition landscape in this report
