Research Summary

Maleic Anhydride Modified Polypropylene Wax (MAPW) is a modified version of polypropylene wax that has been chemically treated with maleic anhydride to introduce functional groups, enhancing its compatibility with a wide range of other materials. This modification improves the wax's dispersibility, adhesion, and stability, making it ideal for use in applications such as coatings, adhesives, plastics, and rubber. Maleic anhydride grafting creates reactive sites on the polypropylene wax, allowing it to bond more effectively with polar materials like resins, pigments, and fillers. MAPW is commonly used as a processing aid, lubricating agent, and surface modifier in industries like paints, automotive, and packaging, offering enhanced performance, durability, and smoothness to end products.
