Research Summary

Managed File Transfer (MFT) is a secure and reliable solution used for transferring files between systems or parties. It involves the centralized management, monitoring, and control of file transfers to ensure data integrity, confidentiality, and compliance. MFT solutions offer advanced features that go beyond traditional file transfer protocols (such as FTP or SFTP) by providing enhanced security measures, automation capabilities, audit trails, and comprehensive reporting. With MFT, organizations can securely exchange files with internal departments, external partners, or customers, often incorporating encryption and authentication mechanisms to protect sensitive data during transit. MFT solutions also enable IT administrators to set up and enforce file transfer policies, implement workflows, track transfer activities, and handle exceptions or errors in a streamlined manner.
