Research Summary

Managed VPN (Virtual Private Network) is a service provided by a managed service provider (MSP) that offers organizations secure and reliable access to a private network over the public internet. VPNs create encrypted tunnels between the user's device and the remote network, ensuring the confidentiality, integrity, and privacy of data transmitted over the connection. Managed VPN services involve the outsourced management and administration of VPN infrastructure, including the deployment, configuration, monitoring, and maintenance of VPN connections and associated devices or software. This eliminates the burden of managing VPN infrastructure in-house and allows organizations to focus on their core business activities. Managed VPN services often include features like centralized user management, traffic encryption, security protocols, network monitoring, and support services, ensuring a seamless and secure connection for remote workers, branch offices, or partners accessing the private network. With Managed VPN, organizations can securely extend their private network, enable remote work access, safeguard sensitive data, and ensure reliable connectivity for their distributed workforce or external collaborators.
