Research Summary

Mancozeb is a broad-spectrum fungicide that is widely used in agriculture to control various fungal diseases in crops. It belongs to the class of dithiocarbamate fungicides and is primarily used as a contact fungicide, meaning it acts on the surface of plant tissues to prevent or suppress fungal growth. Mancozeb works by interfering with the energy production and respiration processes of fungi, inhibiting their ability to grow and reproduce. It is effective against a wide range of common fungal pathogens, including those causing diseases in fruits, vegetables, cereals, and ornamental plants. Mancozeb is often used as a protective fungicide, meaning it is applied preventively to protect plants from potential fungal infections before they occur. It is relatively low in toxicity to mammals, birds, and bees, but proper handling, application, and adherence to safety guidelines are still important to minimize any potential risks.

The major global manufacturers of Mancozeb include UPL, Coromandel International, Indofil, DuPont, Limin Chemical, Hebei Shuangji Chemical, XI'AN MPC STOCK, Nantong Baoye Chemical, etc. The global players competition landscape in this report is
