### Research Summary

Mandrel release agents are substances used in manufacturing processes, particularly in the production of cylindrical or tubular products, to facilitate the removal of the product from a mandrel or mold. The mandrel is a cylindrical tool or form around which the material, such as rubber, plastic, or composite, is shaped and cured. Mandrel release agents are applied to the surface of the mandrel before the material is placed on top. These agents create a barrier between the mandrel and the material, preventing adhesion or sticking during the curing or molding process. They can be in the form of sprays, liquids, or coatings and are typically composed of lubricating or anti-adhesive substances, such as silicone, wax, or polymers. The use of mandrel release agents ensures smooth and easy removal of the finished product from the mandrel, reducing the risk of damage or deformation, and improving manufacturing efficiency.

The major global manufacturers of Mandrel Release Agents include Chem-Trend, Struktol, McGee Industries, WN SHAW, Evonik Industries, Lion Specialty Chemicals, Lotrac AB, M?nch Chemie, Maverix Solutions, Shanghai HD Chemical, Dongguan Antai
