Research Summary

Manganese brass is a type of brass alloy primarily composed of copper, zinc, and manganese, with manganese typically making up 1-3% of the alloy's composition. The addition of manganese enhances the alloy's strength, corrosion resistance, and durability, making it ideal for applications that require high mechanical properties and resistance to wear and tear. Manganese brass is commonly used in industries such as marine engineering, automotive, and construction, especially in parts like pipes, fittings, and electrical connectors. The alloy also exhibits good machinability and is resistant to galvanic corrosion, making it well-suited for use in harsh environments where both strength and resistance to corrosion are crucial.

The major global manufacturers of Manganese Brass include LDM Brass, National Bronze, AW Fraser, METAL LINK ALLOYS, CONCAST METAL PRODUCTS, Marmon Group, Powerway Alloy, etc. The global players competition landscape in this report is divided into three tiers.
