Research Summary

Manipulators, in the context of robotics, refer to mechanical devices or robotic arms that are designed to manipulate or handle objects with precision and dexterity. These devices mimic the capabilities of a human hand and arm, allowing for the controlled movement, gripping, and manipulation of objects in various applications. Manipulators consist of a series of interconnected joints and links, often powered by motors or actuators, enabling them to move in multiple degrees of freedom. They may be equipped with various types of end effectors such as grippers, claws, or specialized tools depending on the intended task. Manipulators find extensive use in industrial automation, manufacturing, and assembly processes where tasks requiring intricate movements, precise positioning, and consistent repeatability are involved. They can perform a range of tasks, from picking and placing objects to complex assembly operations, and have significantly enhanced productivity and efficiency in many industries. Additionally, manipulators are also employed in areas such as healthcare, research, and space exploration, where delicate and precise manipulation is required.

The major global manufacturers of Manipulators include Positech, Indeva, ATIS Srl, Movomech, Zasche Handling, Dalmecc, ASE Systems, GCI, Givens Engineering, Ergonomic Partners, Unidex, Manibo, Vinca, Ergoflex, Automech Systems, etc. The global players competition landscape in this report is divided into three tiers.
