Research Summary

A manual pruning saw is a handheld cutting tool used for pruning and trimming trees, shrubs, and other vegetation. It consists of a narrow blade with sharp cutting teeth on one edge and a handle or grip on the other. The blade of a manual pruning saw is specifically designed to efficiently cut through tough branches and foliage, allowing for precise and controlled pruning. The teeth on the blade are typically angled and configured to provide aggressive cutting action while minimizing binding or getting stuck in the wood. Manual pruning saws are typically used in situations where larger branches or thicker growth require more cutting power than what can be achieved with pruning shears or handheld pruners. They are useful tools for gardeners, arborists, and outdoor enthusiasts who need an efficient and portable means of maintaining and shaping plants and trees.

The major global manufacturers of Manual Pruning Saw include Bahco, STIHL, Stanley, Fiskars, Corona Tools, ARS CORPORATION, Wilkinson Sword, Samurai Saws, Komelon, G-MAN Tools, Silky Saws, Reliable Tools and Hardware, GREEN WALKER
