Research Summary

Manufacturing Execution Systems (MES), also known as Manufacturing Execution Systems (EMS), are software-based systems used in manufacturing industries to manage and control production processes and operations on the shop floor. An EMS acts as a bridge between the enterprise resource planning (ERP) system and the automation systems on the factory floor, providing real-time visibility, tracking, and control of manufacturing activities. It collects, monitors, and analyzes data from various sources, such as equipment, machines, and workers, enabling efficient production scheduling, resource allocation, quality control, and inventory management. EMS solutions often include modules for production tracking, work order management, materials management, equipment maintenance, electronic document control, and performance monitoring. These systems help optimize productivity, improve quality, reduce cycle times, minimize waste, and enhance overall manufacturing efficiency. By providing real-time data and actionable insights, EMS enables manufacturers to make informed decisions, streamline processes, improve operational performance, and

ultimately deliver products to market faster and more cost-effectively.

The major global suppliers of Manufacturing Execution Systems (EMS) include Rockwell Automation, Siemens AG, SAP, General Electric Company, Oracle Corporation, Emerson Electric, Werum IT Solutions GmbH, ABB Ltd, AVEVA Group, Honeywell International, Dassault Systemes SE, PSI Metals GmbH, OSIsoft, MPDV Mikrolab GmbH, iTAC Software, etc. The global players competition landscape in this report is divided into three tiers.
