Research Summary

Maple water, also known as maple sap or maple tree water, is the translucent, watery sap that is harvested from maple trees before being boiled down to create maple syrup. Maple water is collected during the early spring when the maple trees start to awaken from their winter dormancy. It flows naturally through the tree's vascular system, carrying vital nutrients and minerals as it prepares to nourish new leaves. Maple water has gained popularity as a refreshing and hydrating beverage due to its subtle sweetness and unique flavor, which is often described as delicate and slightly sweet with a hint of earthiness. It is considered a natural and nutritious alternative to traditional sugary drinks, as it typically contains fewer calories and sugar while offering trace amounts of minerals like potassium, calcium, and magnesium. Maple water is enjoyed chilled and can be consumed on its own or used as a base for smoothies, cocktails, and other beverages.
