Research Summary

Maraging steel is a specialized type of steel known for its exceptional strength, toughness, and resistance to wear and fatigue. It belongs to the family of steels called "maraging steels," which stands for "martensitic age-hardening" steels. Maraging steel is primarily composed of iron, along with alloying elements such as nickel, cobalt, molybdenum, titanium, and small amounts of other elements. These alloying elements contribute to its unique properties. Maraging steel undergoes a specific heat treatment process called aging, where it is aged at elevated temperatures to achieve its desired strength and hardness. The resulting material exhibits a combination of high tensile strength and hardness, making it suitable for a variety of demanding applications, including aerospace components, tooling, missile and rocket systems, high-performance sports equipment, and other high-stress environments. Maraging steel's excellent mechanical properties, coupled with its ability to maintain these properties even at elevated temperatures, make it a sought-after material in industries where strength and durability are paramount.

The major global manufacturers of Maraging Steel include Hitachi Metals, Universal

Stainless, Villares Metals, Dongbei Special Steel Group, NIPPON KOSHUHA, Bao steel, Daido Steel, Aubert & Dural, Bohler, etc. The global players competition landscape in this report is divided into three tiers.
