Research Summary

Marine composites refer to materials used in the construction of boats, ships, and other marine structures, which are composed of a combination of two or more distinct materials with different properties. These composites are designed to enhance the structural integrity, performance, and durability of marine vessels while reducing their weight. Typical marine composite materials include fiberglass, carbon fiber, Kevlar, and various resins or polymers. The combination of these materials results in composites that offer high strength-to-weight ratios, resistance to corrosion, moisture, and UV degradation, and improved impact resistance compared to traditional materials. Marine composites are commonly employed in the construction of hulls, decks, superstructures, and internal components of boats and ships, providing lightweight and strong alternatives to conventional materials such as steel or aluminum. The use of marine composites helps to improve fuel efficiency, increase speed, reduce maintenance requirements, and enhance overall performance and longevity in marine applications.

The major global manufacturers of Marine Composites include Gurit, Owens Corning,

Toray, DuPont, Johns Manville, Hexcel Corporation, Cytex Solvay Group, 3A Composites, Future Pipe Industries, SGL Group, National Oilwell Varco, Janicki Industries, Marine Plastics, Jiumei Fiber Glass, PE Composites, Pipe Composites, Aeromarine Industries, Teijin, AGC, Mitsubishi Rayon, PPG, TenCate, etc. The global players competition landscape in this report is divided into three tiers.
