### Research Summary

Marine grade fasteners refer to specialized fastening components designed specifically for use in marine environments. These fasteners are engineered to withstand the corrosive effects of saltwater, high humidity, and other harsh conditions encountered in marine applications. They are typically made from corrosion-resistant materials like stainless steel, brass, or bronze, which offer resistance to rust, oxidation, and degradation caused by exposure to saltwater. Marine grade fasteners are commonly used in boat building, shipbuilding, offshore structures, and other maritime applications where durability and longevity are crucial. They come in various types, including screws, bolts, nuts, washers, and rivets, and are designed to provide secure and reliable fastening in wet and corrosive environments.
