### Research Summary

Marine VHF (Very High Frequency) radio is a communication system widely used in maritime environments for ship-to-ship and ship-to-shore communications. It operates on specific frequencies designated for marine use and is regulated by the International Telecommunication Union (ITU). Marine VHF radio enables reliable and efficient communication between vessels, as well as with rescue coordination centers, harbor masters, and other relevant maritime authorities. It is primarily used for safety communication, navigation assistance, distress signaling, weather updates, and general information exchange in both routine and emergency situations. Marine VHF radios are designed to be compact, durable, and waterproof to withstand the harsh marine environment. They typically have a range of several nautical miles, although the actual range can be affected by factors such as antenna height and terrain. Proper licensing and adherence to established protocols, such as the use of international distress and calling frequencies, are essential for effective and responsible utilization of marine VHF radio communication.

The major global manufacturers of Marine VHF Radio include Icom Inc., Standard Horizon (Yaesu), Cobra Electronics Corporation (Monomoy Capital Partners), Uniden, Raymarine (FLIR Systems), Entel Group, JVCKENWOOD, Jotron, Navico, SAILOR (Satcom Global), Furuno, Fujian Feitong Communication Technology, Recent, etc. The global players competition landscape in this report is divided into three tiers.
