Research Summary

Matrigel is a gelatinous protein mixture derived from the basement membrane of Engelbreth-Holm-Swarm (EHS) mouse sarcoma, rich in extracellular matrix components like laminin, collagen IV, entactin, and heparan sulfate proteoglycans. This mixture mimics the natural extracellular matrix, providing a supportive scaffold for cell attachment, growth, differentiation, and three-dimensional organization in cell culture applications. Widely used in research, Matrigel facilitates studies on cell proliferation, migration, differentiation, angiogenesis, and tumor formation. It is particularly valuable in stem cell research and regenerative medicine, where it helps maintain stem cell pluripotency and guides differentiation into specific lineages. By replicating the in vivo environment, Matrigel enables the creation of more physiologically relevant cell culture models, enhancing the study of cellular behaviors and interactions.

The major global manufacturers of Matrigel include Corning, Merck, Thermo Fisher Scientific, Danaher, OPM Biosciences, Yeasen Biotechnology, Solarbio Science & Technology, Livo Biotechnology, Meryer Chemical, etc. The global players competition landscape in this report is divided into three tiers.
