Research Summary

Mechanical tubing refers to a type of hollow cylindrical product made from various materials, such as steel, aluminum, or stainless steel, with specific mechanical properties. It is typically used in applications that require structural strength, precision, and dimensional accuracy. Mechanical tubing is manufactured through a process called tube extrusion, where a solid piece of material is passed through a die to form the desired shape and size. The resulting tube has precise dimensions, smooth surfaces, and consistent wall thicknesses, making it suitable for applications such as automotive components, machinery, construction, furniture, and more. Mechanical tubing is often used when the tolerances and mechanical properties of the tubular product are critical for the functionality and reliability of the application. It can be further processed, such as through cutting, bending, or welding, to meet specific requirements and configurations.

The major global manufacturers of Mechanical Tubing include TimkenSteel, RSAC, Vallourec, Zekelman Industries, JFE Steel, Tenaris, U. S. Steel, Nucor Corporation, Hengyang Valin Steel Tube, AK Steel, Webco Industries, Sandvik Materials, Midwest
