Research Summary

Medical bioactive glass refers to a specialized type of glass that has unique properties making it suitable for various medical applications. Bioactive glass is composed of inorganic materials, primarily silicon dioxide (SiO₂), calcium oxide (CaO), phosphorus pentoxide (P₂O₅), and sodium oxide (Na₂O). One of the key features of bioactive glass is its ability to bond with living tissues through a process called bioactivity. When in contact with bodily fluids, bioactive glass forms a hydroxyapatite layer on its surface, which is similar to the mineral component of bones. This biocompatible property of bioactive glass allows it to integrate with surrounding tissues, making it ideal for applications such as bone grafts, dental implants, and tissue engineering. Additionally, bioactive glass has antimicrobial properties, making it effective in preventing infections and promoting healing. Through its unique characteristics, medical bioactive glass offers innovative solutions in regenerative medicine and plays a crucial role in improving patient outcomes and advancing medical treatments.

The major global manufacturers of Medical Bioactive Glass include Zimmer Biomet
