### Research Summary

Medical copper tubing refers to a type of tubing made from copper that is specifically designed for use in medical applications. Copper tubing is valued in the medical field for its excellent conductivity, durability, and antimicrobial properties. It is commonly used in various medical devices and equipment, such as oxygen delivery systems, intravenous (IV) lines, catheters, and surgical instruments. Copper has natural antimicrobial properties that help inhibit the growth of bacteria, viruses, and fungi on the tubing's surface, potentially reducing the risk of healthcare-associated infections.
