Research Summary

Medical DVT pumps, also known as intermittent pneumatic compression (IPC) devices, are medical devices used to prevent deep vein thrombosis (DVT). DVT is a condition where blood clots form in the deep veins of the body, commonly in the legs, which can be life-threatening if the clot dislodges and travels to vital organs. DVT pumps consist of an inflatable garment or sleeve that is applied to the patient's leg or foot and connected to a pump. The pump delivers intermittent compression to the limb, exerting pressure on the veins and encouraging blood flow. The compression and release cycles help prevent the formation of blood clots by enhancing venous return and reducing stasis. DVT pumps are commonly used in hospitals, particularly during surgeries or when a patient is immobile or at high risk of developing DVT. They are also utilized in ambulatory settings or at home for patients who require prolonged periods of immobility or have conditions that predispose them to DVT. Medical DVT pumps are an effective and non-invasive method to promote circulation and reduce the risk of DVT formation, facilitating better patient outcomes and reducing the complications associated with blood clots.

The major global manufacturers of Medical DVT Pumps include ArjoHuntleigh, Zimmer Biomet, Breg, DJO, Devon Medical Products, Cardinal Health, Currie Medical Specialties, Mego Afek AC LTD, Bio Compression Systems, Medcaptain, ThermoTek USA, etc. The global players competition landscape in this report is divided into three tiers.
