Research Summary

Medical face masks, also known as surgical masks or procedure masks, are protective coverings designed to guard against the transmission of respiratory droplets and particles. They are commonly used in healthcare settings, including hospitals, clinics, and doctor's offices, to reduce the risk of spreading infectious diseases and maintain a sterile environment. Medical face masks are typically made from multiple layers of material, including a non-woven fabric outer layer, a melt-blown filtration layer, and a soft, absorbent inner layer. These layers work together to filter out airborne particles, droplets, and large respiratory secretions expelled by the wearer or block inhalation of certain hazardous substances. Medical face masks are available in different types, such as earloop masks or tie-on masks, and they may feature a nasal wire or foam padding for improved fit and comfort. They are designed to be disposable and should be discarded after use or when damaged, contaminated, or moist to maintain optimal hygiene and effectiveness. Proper use and disposal of medical face masks, along with other infection control measures, play a crucial role in preventing the spread of diseases, protecting healthcare workers and patients, and maintaining a safe healthcare

environment.
