### Research Summary

A medical flat panel detector (FPD) is an advanced digital imaging device used in medical radiography and fluoroscopy to capture X-ray images in real time. Unlike traditional X-ray film or computed radiography (CR) systems, FPDs utilize direct digital imaging technology to convert X-ray photons into electronic signals directly. The FPD consists of a flat panel containing a scintillator layer that converts X-ray photons into visible light, which is then detected by an array of thin-film transistors (TFTs) or amorphous silicon photodiodes. These electronic signals are processed and converted into high-resolution digital images by the imaging system, offering advantages such as faster image acquisition, improved image quality, lower radiation dose to patients, and immediate availability of digital images for viewing and analysis. Medical FPDs are essential tools in diagnostic imaging, providing healthcare professionals with accurate and detailed images for precise diagnosis and treatment planning.

The major global manufacturers of Medical Flat Panel Detector include GE Healthcare, Carestream Health, Canon Medical Systems, Fujifilm Medical, Canon, PerkinElmer,
