Research Summary

Medical jet nebulizers are devices used in respiratory therapy to deliver medication in the form of a mist for inhalation. They consist of a compressor that generates airflow, a medication chamber where liquid medication is placed, and a mouthpiece or mask through which the patient inhales the medication. When the compressor creates airflow, it passes through the medication chamber, drawing the liquid medication into small droplets. These droplets mix with the airflow, forming a mist that the patient breathes in. Jet nebulizers are commonly used to administer bronchodilators, corticosteroids, and other respiratory medications for conditions like asthma, chronic obstructive pulmonary disease (COPD), and respiratory infections, offering an effective and accessible treatment option in hospitals, clinics, and home settings.

The major global manufacturers of Medical Jet Nebulizers include Agilent Technologies, PHILIPS, Pulox, Omron, Allied Healthcare Products, PARI, Yuwell, Emser, Drive DeVilbiss Healthcare, Rossmax International, BD, Leyi, GF Health Products, Briggs Healthcare, Trudell Medical International, Heal Force Bio-Meditech Holdings, Roche,
