Research Summary

A medical nebulizer is a device used in respiratory therapy to deliver medication in the form of a fine mist or aerosol directly to the lungs. It is commonly used to treat conditions such as asthma, chronic obstructive pulmonary disease (COPD), or other respiratory disorders. The nebulizer converts liquid medication into a mist by passing compressed air or oxygen through the medication chamber. The mist is then inhaled through a mask or mouthpiece, allowing the medication to reach deep into the airways and provide localized treatment. Medical nebulizers are available in various types, including jet nebulizers, ultrasonic nebulizers, and mesh nebulizers, each using different mechanisms to generate the aerosol. They are portable, easy to use, and suitable for patients of all ages. Nebulizer therapy helps relieve symptoms, reduce airway inflammation, and improve respiratory function, providing effective and targeted treatment for respiratory conditions.

The major global manufacturers of Medical Nebulizer include PARI, Omron, Drive DeVilbiss Healthcare, Philips, Allied Healthcare Products, CareFusion, Yuwell, Honsun
