### Research Summary

Medical polyurethane dressing is a type of advanced wound care product made from semi-permeable polyurethane film or foam, designed to promote optimal healing by maintaining a moist wound environment while allowing the exchange of gases like oxygen and carbon dioxide. These dressings are highly absorbent, flexible, and conformable, making them suitable for a variety of wound types, including pressure ulcers, burns, surgical incisions, and chronic wounds. They provide a protective barrier against bacteria and contaminants while minimizing trauma during dressing changes.
