Research Summary

A medical touch screen is a specialized display interface used in healthcare settings that allows users to interact with medical devices and systems through touch-based inputs. These touch screens are designed to meet the stringent requirements of medical applications, ensuring reliability, accuracy, and hygiene. Typically found in devices such as patient monitors, infusion pumps, diagnostic equipment, and electronic medical records (EMR) systems, medical touch screens are made of durable materials capable of withstanding frequent cleaning and disinfection with harsh chemicals. They often feature anti-glare coatings for enhanced visibility and may include anti-microbial coatings to inhibit bacterial growth.
