Medical waste management refers to the systematic handling, storage, treatment, and disposal of waste generated from healthcare facilities. It involves implementing protocols and procedures to ensure the safe and proper management of various types of medical waste, including infectious materials, sharps (such as needles and scalpels), pharmaceutical waste, laboratory waste, and non-hazardous waste. Proper medical waste management is essential to protect public health, prevent the spread of infectious diseases, and minimize environmental pollution and occupational hazards. It typically involves segregation of different types of waste at the point of generation, using appropriate containers and labeling, followed by proper collection, transportation, and treatment. Treatment methods may include autoclaving, incineration, chemical disinfection, or alternative technologies depending on the nature of the waste.
