### Research Summary

A medical wire loop snare is a specialized medical instrument used in various procedures such as endoscopy and interventional radiology. It is designed to capture, retrieve, or remove foreign objects, tissue samples, or abnormal growths from within the body. The snare typically consists of a flexible wire loop made of materials like stainless steel or nitinol, which can be manipulated by the operator through a catheter or endoscope. The loop can be opened and closed using a control mechanism to encircle and securely grasp the target object or tissue. Medical wire loop snares are used in diagnostic and therapeutic procedures to perform tasks such as polyp removal in the gastrointestinal tract, stone retrieval in the urinary system, or foreign body extraction in various anatomical locations. These devices play a crucial role in minimally invasive procedures, aiding in accurate diagnosis and treatment while reducing patient discomfort and recovery time.
