Research Summary

Medical X-ray radiation protection glass is a specialized type of glass designed to effectively attenuate and shield against X-ray radiation. It is commonly used in medical facilities, such as radiology departments, diagnostic imaging centers, and interventional suites, to protect patients, healthcare professionals, and visitors from unnecessary exposure to ionizing radiation. The radiation protection glass contains high-density materials, such as lead or barium, which possess excellent X-ray absorption properties. These materials are incorporated into the glass during the manufacturing process or applied as a protective coating. The radiation protection glass acts as a barrier, limiting the transmission of X-ray radiation and reducing the risk of radiation-induced harm. It helps to maintain a safe environment by preventing scattered radiation from reaching unintended areas and optimizing the balance between radiation protection and the visibility required for medical imaging procedures. Radiolucent areas in the glass allow for clear visualization of the patient and medical equipment, ensuring accurate positioning and precise diagnosis while ensuring the safety of individuals nearby.

The major global manufacturers of Medical X-ray Radiation Protection Glass include Corning, NEG, SCHOTT, Haerens, Mayco Industries, Anlan, Raybloc, Shenwang, Radiation Protection, Abrisa Technologies, Ray-Bar Engineering Corporation, Stralskydd, Anchor-Ventana, etc. The global players competition landscape in this report is divided into three tiers.
