Research Summary

A medium performance air filter is a type of air filter that falls in the middle range of efficiency and filtration capabilities. These filters are designed to capture moderate levels of airborne particles and contaminants from the air, providing a balance between air quality improvement and system efficiency. Medium performance air filters are commonly used in residential, commercial, and industrial HVAC (Heating, Ventilation, and Air Conditioning) systems to maintain clean and healthy indoor air. They can remove particles like dust, pollen, mold spores, pet dander, and some larger particulate matter. While they may not capture the smallest and most harmful particles, such as viruses or ultrafine particles, medium performance filters still offer significant improvements in air quality and can provide adequate filtration for standard indoor environments. Regular maintenance and replacement of these filters is important to ensure optimal performance and prolong the lifespan of the HVAC system.
