Research Summary

Medium voltage instrument transformers are devices used in electrical power systems to measure and monitor high currents and voltages at medium voltage levels. They are commonly employed to scale down the current and voltage values to levels compatible with standard measurement and protection devices. Instrument transformers include two main types: current transformers (CTs) and voltage transformers (VTs or potential transformers). Current transformers are used to measure and transmit reduced current values accurately to protective relays, meters, and other monitoring devices. Voltage transformers, on the other hand, are designed to step down the high voltage levels to a safe and manageable range for measuring voltage and providing reference signals. Medium voltage instrument transformers ensure accurate metering, control, and protection of equipment and systems, while also enhancing operator safety by isolating high voltage for measurement purposes. They play a vital role in various applications, including power generation plants, substations, industrial facilities, and utility networks.

The major global manufacturers of Medium Voltage Instrument Transformers include ABB, RITZ, Artech, Meremac, GEC Durham, General Electric, Koncar, Schneider Electric, Siemens, CG Power and Industrial Solutions Limited, Pfiffner, Amran Instrument Transformers, Eaton, ITEC, Trench Group, Zelisko, Hill Tech, RS ISOLSEC, Sentran Corporation, Sadtem, DYH, XD Group, TBEA, Esitas Elektrik, MGM Transformer Company, Instrument Transformers Limited (ITL), etc. The global players competition landscape in this report is divided into three tiers.
