### Research Summary

Medium voltage vacuum contactors are electrical switching devices used in medium voltage applications to control the flow of electrical power. They are specifically designed to handle voltage levels typically ranging from 3 kV to 15 kV. Vacuum contactors use a vacuum interrupter as the core switching component instead of traditional arc-quenching mediums like oil or air. The vacuum interrupter creates a vacuum environment that effectively extinguishes the electrical arc when the contacts are opened or closed, ensuring reliable and efficient switching operations. Medium voltage vacuum contactors are commonly used in a variety of applications, including motor control, capacitor banks, transformers, and other medium voltage power distribution systems. They offer advantages such as compact size, high switching capacity, low maintenance requirements, and excellent electrical insulation properties. The vacuum technology employed in these contactors provides enhanced performance, longer service life, and reduced risks associated with arc-flash and environmental hazards. Medium voltage vacuum contactors play a crucial role in controlling and

protecting medium voltage electrical systems, contributing to the safe and efficient operation of power distribution networks.

The major global manufacturers of Medium Voltage Vacuum Contactors include Eaton, ABB, Toshiba, Siemens, General Electric, Joslyn Clark, Mitsubishi Electric, Artech, Tavrida Electric, etc. The global players competition landscape in this report is divided into three tiers.
