Research Summary

Melamine foam blocks, also known by the brand name ?Melamine Foam,? are lightweight and porous materials made from melamine resin. Unlike traditional foam materials, melamine foam has an open-cell structure composed of interconnected filaments that create a unique three-dimensional network. This structure gives melamine foam exceptional sound-absorbing, thermal-insulating, and cleaning properties. Melamine foam blocks are widely used as soundproofing and acoustic treatment materials in construction and industrial settings due to their ability to absorb and dampen sound waves across a broad frequency range. Additionally, they are popularly known as cleaning sponges or erasers due to their excellent ability to remove stains, dirt, and marks from various surfaces with minimal effort and without the need for harsh chemicals. Melamine foam blocks are versatile, durable, and environmentally friendly, making them a preferred choice for a range of applications in the acoustic and cleaning industries.

The major global manufacturers of Melamine Foam Block include BASF, Dongsung
