Research Summary

Melamine polyphosphate is a flame retardant compound used in various industries to improve the fire resistance of materials. It is formed by the condensation of melamine and phosphoric acid to create long-chain polyphosphates. Melamine polyphosphate is an effective flame retardant due to its ability to release phosphoric acid when exposed to heat, which dilutes the combustible gases and inhibits the spread of flames. It is commonly used in plastic and polymer applications, such as in electrical and electronic devices, textiles, coatings, and construction materials, to meet fire safety regulations and enhance the fire resistance of these materials. Melamine polyphosphate is considered a halogen-free and environmentally-friendly flame retardant option, making it desirable in various industries where fire safety is a priority.

The major global manufacturers of Melamine Polyphosphate include Sichuan Institute of Fine Chemical Industry Research and Design, Zhenjiang Sanwa Flame Retardant Technology, JLS Chemical, Zhenjiang Xingxing Flame Retardants, Jianguyin Suli Chemical, Novista Group, Shouguang Weidong Chemical, Puyang Chengke Chemical,
