Research Summary

A melt pump is a type of positive displacement pump primarily used in plastic extrusion processes. It is designed to control the flow rate and pressure of molten plastic or polymer materials as they are extruded through the process. The melt pump works by creating a constant, steady flow by removing any fluctuations or variations in pressure caused by the extruder. It consists of one or more gear-like rotor elements enclosed within a housing. As the molten material flows into the pump, the rotating gears trap and carry the material, maintaining a consistent output pressure. This helps ensure precise and uniform extrusion, resulting in improved product quality, reduced waste, and increased production efficiency. Melt pumps find applications in various plastic processing industries, including film and sheet extrusion, pipe and profile extrusion, and compounding, among others.

The major global manufacturers of Melt Pump include Dover (PSG), Oerlikon, Nordson, WITTE, Coperion, Kawasaki Heavy Industries, Zenith Pumps, Kobelco, GMA, Pnh Extrusion Gear Pumps, PSI, Batte, Haike Extrusion Gear Pumps, JCtimes, Anji Chemical, Deao Machinery, Lantai Machinery, etc. The global players competition
