### Research Summary

A melt screen changer, also known as a melt filter changer, is a device used in plastic extrusion processes to remove impurities and prevent contamination during the extrusion of molten plastic materials. It is designed to continuously filter out contaminants such as gels, gels, foreign particles, or any other solid or semi-solid impurities present in the melt stream. The melt screen changer consists of two or more filter screens or discs stacked together within a housing. As the molten plastic passes through the filter screens, the contaminants are captured and retained while the filtered melt is allowed to pass through. When the screens become clogged or reach a pre-set pressure limit, the screen changer automatically switches to a clean set of screens, allowing the process to continue uninterrupted. This helps maintain product quality, reduce downtime for cleaning or maintenance, and improve overall production efficiency. Melt screen changers are commonly used in various plastic extrusion applications, including film and sheet extrusion, blow molding, and pipe extrusion, among others.

The major global manufacturers of Melt Screen Changers include Nordson, MAAG, Gneuss, Erema, Parkinson Technologies, Hi-tech, Cofit International, PSI, ECON, Trendelkamp, CROWN, Alpha Marathon, JC Times, Batte Mechanical, Anji Plastic, Heiko, etc. The global players competition landscape in this report is divided into three tiers.
