### Research Summary

A mercury UV lamp is a type of ultraviolet (UV) light source that uses mercury vapor to produce UV radiation, typically in the UV-C range, which is commonly used for sterilization, disinfection, and curing applications. These lamps consist of a glass tube filled with mercury gas, and when an electrical current passes through the tube, the mercury vapor emits UV light. The UV-C radiation produced by mercury UV lamps is effective in killing or inactivating bacteria, viruses, and other microorganisms, making them widely used in water purification, air sterilization, and surface disinfection. Additionally, mercury UV lamps are employed in industries for curing inks, coatings, and adhesives, where rapid hardening of materials is required. While effective, mercury UV lamps must be handled with care due to the toxic nature of mercury, and newer technologies like low-pressure mercury lamps or LED-based UV lights are emerging as alternatives for some applications.

The major global manufacturers of Mercury UV Lamp include OSRAM GmbH, Ushio Inc., Excelitas Nobilelight, Alpha-Cure, Light Sources, Inc., Signify Holding, Hamamatsu
