Research Summary

Mesitylene is an aromatic hydrocarbon with the chemical formula C_9H_{12} . It is a colorless liquid that has a sweet, pleasant odor. Mesitylene is often derived from crude oil or coal tar and can be found in small amounts in some natural sources like coal and shale oil. It is primarily used as a solvent in various industrial processes, such as in the production of nitrocellulose lacquers, resins, and coatings. Mesitylene is also employed as a precursor in the synthesis of other chemicals, including pharmaceuticals, dyes, and rubber additives. Its unique chemical properties, including its high boiling point and low freezing point, make it useful in many applications. Additionally, mesitylene is often used as a reference compound in organic chemistry experiments and spectroscopic analysis due to its well-defined chemical properties. However, it is important to note that mesitylene can be flammable and should be handled with appropriate precautions.

The major global manufacturers of Mesitylene include Mitsubishi Gas Chemical, DuPont, Versalis, Refinery of Sinopec Jinling (Sinopec), EMD Performance Materials, Toyo Gosei, Jiangsu Jiuri Chemical, Nantong Dingji Chemical Technology, Jurong
