Research Summary

Meso-erythritol, commonly known as erythritol, is a natural sugar alcohol that is widely used as a low-calorie sweetener and sugar substitute. It is found naturally in some fruits, such as pears, grapes, and melons, as well as in certain fermented foods and beverages. Erythritol has a sweet taste similar to sugar but contains significantly fewer calories and has a minimal impact on blood sugar levels, making it suitable for people with diabetes or those following low-carbohydrate diets. It is also non-cariogenic, meaning it does not contribute to tooth decay. Erythritol is metabolized differently from regular sugar and is largely absorbed by the body and excreted unchanged in the urine, resulting in minimal digestive side effects compared to other sugar alcohols. It is used in a wide range of food and beverage products, including sugar-free candies, chewing gum, baked goods, and beverages, as well as in tabletop sweeteners. However, it is important to note that while erythritol is generally considered safe, consuming excessive amounts may cause gastrointestinal discomfort in some individuals.

The major global manufacturers of Meso Erythritol include Cargill, Mitsubishi, Nikken-

chemical, Baolingbao Biology, Shandong Sanyuan Biotechnology, Zhongshun Sci. &Tech., Futaste, etc. The global players competition landscape in this report is divided into three tiers.
