Research Summary

Meta-xylylene diamine, also known as MXDA, is a chemical compound with the molecular formula $C_9H_{14}N_2$. It is a diamine, meaning it contains two amino groups (-NH₂) attached to a central benzene ring. MXDA is primarily used as a curing agent or cross-linking agent in epoxy resin systems. When combined with epoxy resins, MXDA undergoes a chemical reaction known as curing or cross-linking, which transforms the liquid epoxy into a solid, durable, and heat-resistant material. MXDA offers several desirable properties for epoxy resin applications, including high heat resistance, excellent chemical resistance, low viscosity, and good color stability. It is commonly used in industrial coatings, adhesives, composite materials, and electrical insulating applications where high-performance, strong, and durable materials are required. MXDA is typically handled and used with proper safety precautions in industrial settings due to its reactive nature.

The major global manufacturers of Meta Xylylene Diamine include Mitsubishi Gas Chemical, CAC Nantong Chemical, Shanghai Ingoo Chemical, etc. The global players
